## FROM THE DESK OF CHAIRMAN

Dear Students and readers,

As an Indian, I felt proud about the soft-landing of Chandrayaan-3 on the moon! In the vast space of our universe, where mythology and science come together so often, Chandrayaan-3 shines brightly as a symbol of India's astral hope and exploration. It shows India's strong determination to uncover the moon's mysteries. India's space agency, ISRO, has announced plans to launch its first space observatory for solar research, Aditya-L1, in September, 2023.

Today world is moving towards AI. Artificial intelligence (AI) has come a long way in recent years, and its capabilities are becoming increasingly impressive. AI can perform tasks that were once thought to be exclusive to human intelligence, such as language translation, writing letters, searching case laws, image recognition, and even composing music. With these advancements, many are beginning to wonder if AI can replace human creativity.

Can AI Replace Human Creativity?

The short answer may be no. AI can mimic certain aspects of creativity, but it cannot truly replace human creativity. The reason for this is that creativity is not just about generating new ideas or solutions; it is also about the process of creating, the emotional and personal connections that are formed during the creative process, and the human experience that is inherent in all creative endeavors.

That being said, AI can be used to enhance and complement human creativity. For example, AI can assist with the generation of ideas and provide inspiration for human creatives. But ultimately, it is up to humans to interpret and apply these insights in a way that is meaningful and resonates with audiences.

As AI continues to evolve, it will be exciting to see how it can be used to push the boundaries of human creativity even further.

AI and creativity can coexist and complement each other. By embracing this partnership between humans and AI, we can unlock a whole new world of creativity and innovation.

To become more creative and innovative, it is important to present yourself either by way of leading group discussion, study circle and more importantly writing articles in 'Indradhanush'. To bridge this gap, students' committee of CVOCA association has thought of rolling out magazine for students.

As a Chartered Accountant, we all are involved with one of the most basic pillars upon which our civilization is built – the economy. As such, it would be of paramount importance for you to remain updated on everything that happens in your profession. CVOCA's 'Indradhanush' will be like a guide and companion rolled into one. The magazines would definitely lead you on a path of knowledge, and benefit you eventually in your profession. It will also serve to build professional connect, thereby paving way for better future prospects.

Looking forward for enhanced participation in various activities and events organised by the students' committee of CVOCA Association.

Last but not the least, on the occasion of Paryushan Parv, I seek forgiveness and say “Michami Dukkadam!!”.

Sd/-  
CANilesh Dedhia  
Chairman.
